

REVOLUTIONARY CONNECTIONS FOR SPARK PLUGS AND SPARK PLUG CABLES

ABSTRACT : A construction for connecting a spark plug terminal to a spark plug cable terminal. The construction is comprised of a spring-loaded spacer, a cotter pin which is built in the spark plug terminal and a slotted spark plug cable terminal and provides an interlocking relationship between both said terminals. One major mechanical difference from conventional spark plug cable systems is that instead of pulling and pushing on the connection the construction employs pressing and turning in connecting and deattaching the connection.
